eLearning

Located in the infocentre website, eLearning uses technology to create a virtual classroom where learners from any location can access information and learn about a new topic, guidance, or project. eLearning is often referred to as electronic learning, distance learning, or virtual learning.

Internet searches for HIV and AIDS information

The World Wide Web has a wealth of up-to-date resources on HIV and AIDS. Our aim is to assist our users to access this information.

Document delivery by post and electronically

This service is targeted at those who do not have access to the internet and cannot physically visit the Centre.

Video viewing facilities

Audiovisuals have more impact in disseminating information. We enable users to have access to these facilities.
